1. Introduction

This manual explains how to do the daily Sampath work in YMS. The pages are grouped in the left-hand menu under three headings:

Menu	Purpose	Pages
Sampath Uploads	Bring data in from Excel files	Unilever Purchase Import · Sampath Inventory (Pre Sec + Sec) · Sampath GRN Summary · Sampath Damage Entry · Import Sampath Damages · Import Physical Stock · Market Order Import
Sampath Operation	Day-to-day work: damages, payments, rejected goods, stock count, adjustments, checks	Damage Entry AI Tally & Confirm · Sampath Super Payments · Sampath GRN Reasons · Sampath Goods Rejected · Sampath Stock Reconciliation · Item Adjustment · Invoice GRN Check · Send to Payments · Sent Payment Requests · PDF to Excel
Sampath Reports	Reports and analysis	Credit Aging Report · Sampath Inventory Report · Sampath Age Analysis · Sampath Balancing Report · USL PO Report · Inventory Reconciliation Report

Tips that apply to every page

- Open the menu on the left. **Sampath Operation**, **Sampath Uploads** and **Sampath Reports** are in Quick Access; everything else is under the collapsed **Other Menus** group — click it to expand.
- Dates are entered with the date picker. Amounts are in Rs.; stock quantities are in **units** (cases × UPC).
- Most reports have an **Export Excel** button and a **PDF / Print** button (choose “Save as PDF” as the printer to get a PDF).
- A filter or search box only changes what you see — it never deletes or edits data.
- Deleting an import or a request cannot be undone. You are always asked to confirm first.

2. Daily workflow at a glance

Step	Page	What you do
1	Unilever Purchase Import	Upload each Unilever purchase (primary) file. A minus quantity is treated as a purchase return.
2	Sampath Inventory (Pre Sec + Sec)	Upload the Pre Secondary and Secondary invoice Excel (invoices on tab 1, items on tab 2).
3	Sampath GRN Summary	Import the Sampath GRN report; check duplicates and link each GRN to its invoice.
4	Sampath Damage Entry / Import Sampath Damages	Import the damage return files and the damage qty from the Invoice Wise Sales Excel.
5	Damage Entry AI Tally & Confirm	Match every damage line to a system item and confirm it.
6	Sampath Goods Rejected / Item Adjustment	Record rejected GRN entries and any stock adjustments.
7	Sampath Stock Reconciliation	Upload the physical stock count and compare it with system stock.
8	Send to Payments	Select the invoices to claim and send them to payments with a date and remark.
9	Sampath Super Payments	Record cheque payments and credit notes against invoices.
10	Sampath Reports	Review the Inventory, Age Analysis, Balancing and Reconciliation reports.

3. Sampath Uploads

3.1 Unilever Purchase Import

Menu: Sampath Uploads → Unilever Purchase Import

Imports the LeverEDGE “Product Wise Purchase” Excel (primary purchases). Each upload becomes one batch with its line items.

How to use

1. Choose the Excel file and enter the received date and invoice details if asked.
2. Press Import. The batch appears in the list below.
3. Open a batch to see its items. Use delete on the batch to remove it together with all its items.

Rows with a **minus** purchase quantity are purchase **returns**. All stock reports treat plus rows as Primary Purchase and minus rows as Primary Returned.

3.2 Sampath Inventory (Pre Sec + Sec)

Menu: Sampath Uploads → Sampath Inventory (Pre Sec + Sec)

Upload the Pre Secondary and the Secondary invoice-wise sales Excel in one page. One Excel holds **invoices on the 1st tab** and **items on the 2nd tab**.

How to use

1. Select the delivery date and the file for Pre Secondary or Secondary.
2. Upload. Old data for the same date is replaced by the new import.
3. Use the type filter to look at Pre Sec, Sec or both, and the item summary to check quantities.

3.3 Sampath GRN Summary

Menu: Sampath Uploads → Sampath GRN Summary

Imports the Sampath GRN summary report (supplier YELO DISTRIBUTORS). The page has three parts: New Import, Batches and All Records.

How to use

1. **Import:** choose the Excel and import. A row is skipped when the same GRN No, or the same Ref No + Value, already exists.
2. **Batches:** open a batch with View. Edit a GRN or a batch, delete a row or the batch, or use the broom button to remove duplicates.
3. **Invoice Link:** each GRN shows Linked, Manual, Excluded or Unlinked against the Secondary invoices. For an Unlinked GRN press **Find & Link**.
4. The Find & Link window ranks invoices by how many of the **last characters** of the Ref No match the bill number, and by equal amount. Click **Link** beside the right invoice.
5. Use **Unlink** to remove a manual link. Links are saved once and used by the Age Analysis, Balancing and Payment pages.

A GRN can belong to only one invoice. Linking an Excluded GRN replaces its exclusion.

3.4 Sampath Damage Entry

Menu: Sampath Uploads → Sampath Damage Entry

Imports the Sampath damage return Excel. Every GRN in the file is stored with its lines (product code, name, location, price, qty). Duplicate GRNs are flagged in the preview and never imported.

How to use

1. Choose the .xlsx and press preview/import.
2. Check the preview. Duplicate GRNs are marked.
3. Import. The batches list lets you view or delete a batch.

Imported damage lines are not stock yet — confirm them on **Damage Entry AI Tally & Confirm** (section 4.1).

3.5 Import Sampath Damages

Menu: Sampath Uploads → Import Sampath Damages

Imports damages from the Invoice Wise Sales Excel. The **2nd tab (Details Report)** is read and every row that has a **Damage-Expiry Shortage Qty** becomes a damage line.

How to use

1. Drop the .xlsx on the page or click to choose it.
2. The file is read and a window opens showing the line count, qty and value. It also says whether every product exists in the Sampath inventory report.
3. Select the **Damage date** and type a **Remark**, then press **Import**.
4. Below, each import is listed. **View** shows the lines (✓ matched / ✗ not in report); tick lines and **Delete selected**, or **Delete** the whole import.

Lines already imported (same bill, product, batch and qty) are skipped. Imported damages are added to the **Damaged Stock** column of the Sampath Inventory Report and the Inventory Reconciliation Report, on the damage date you chose.

3.6 Import Physical Stock

Menu: Sampath Uploads → Import Physical Stock

Uploads the physical stock count Excel (Sr, Division, SKU, Product Name, No, UPC, Unit, Phy Cases, Phy Pieces) with a stock count date.

How to use

1. Select the stock count date and the Excel.
2. Import. Total Units = (Phy Cases × UPC) + Phy Pieces.
3. View the uploaded count; it can then be picked in the Inventory Reconciliation Report.

3.7 Market Order Import

Menu: Sampath Uploads → Market Order Import

One batch = one Order Proposal Date plus two Excel files: the **Market Order Billing** file and the **Order Sheet**.

How to use

1. Choose the proposal date and upload both files.
2. Open Batches to view or delete a batch.
3. The data feeds the **USL PO Report**.

4. Sampath Operation

4.1 Damage Entry AI Tally & Confirm

Menu: Sampath Operation → Damage Entry AI Tally & Confirm

Matches each damage line from the Sampath Damage Entry with an item of our inventory, using price and name matching plus Gemini AI. Confirmed lines become Damaged Stock (item code with “-D”).

How to use

1. Open the page. Damage lines are grouped by batch and Sampath item code; the same code in one batch is shown as one total.
2. Press **AI Scan**. Each line gets a suggested system item with a match percentage (name and TUR price).
3. If a suggestion is wrong, use **Change** and pick the system item from the list.
4. Confirm: **Confirm selected**, **Bulk confirm** or **Confirm whole batch**.
5. Use **Reverse** on a row, on selected rows or on a whole batch to undo a confirmation.

AI scan needs the Gemini key saved in **AI Settings** (Other Menus → Settings). Only confirmed lines count in Damaged Stock.

4.2 Sampath Super Payments

Menu: Sampath Operation → Sampath Super Payments

The invoice list for Sampath Super with Secondary amount, GRN Rejected, credit notes, balance, amount settled and what is still owed. Each invoice can be paid part by part with cheques.

How to use

1. Find the invoice with the filters or search box.
2. Press **Pay**, enter cheque number, bank, branch, dates and the settle amount, then save. Partial payments build up on the same invoice.
3. To correct a payment open the invoice payment history and edit it — the cheque register is re-synced.
4. **Credit notes:** apply a credit note to one invoice, or select several and use the bulk action to apply credit notes together.
5. Use **Manual Credit Note / Adjustment** for freehand plus or minus amounts with a remark.

4.3 Sampath GRN Reasons

Menu: Sampath Operation → Sampath GRN Reasons

The list of reasons used when GRN items are rejected (for example “Damaged Goods”).

How to use

1. Press Add to create a reason name and tick Active.
2. Use edit to rename or deactivate, delete to remove.
3. Use the search box to find a reason.

4.4 Sampath Goods Rejected

Menu: Sampath Operation → Sampath Goods Rejected

Lists the GRN rejection entries (the same entries that feed “Rejected Qty” in the stock reports) with their supporting documents.

How to use

1. Filter by date, status, document and search text. Switch between **Entries** and **Item summary**.
2. On an entry press **Upload document** to attach the GRN document; use view, replace or remove later.
3. Open an entry to see its items (product, qty, TUR, amount, reason).

4. Delete an entry (and its items) if it was keyed wrongly.

> Draft and cancelled entries are not counted. The value of rejected entries appears in the **Credit Note (GRN Rejected)** column of the Balancing Report.

4.5 Sampath Stock Reconciliation

Menu: Sampath Operation → Sampath Stock Reconciliation

Compares a physical stock count with the system stock and shows short / excess per item.

How to use

1. Select the **Stock Count Date**.
2. Select the base: **Current Stock** (all movements from the start) or **Last Stock Count** (the last uploaded count before the date + movements after it; an item missing from that count starts at 0).
3. Upload the count Excel (Sr No, SKU7, Product Name, Stock Count Unit).
4. Review the short / excess, then press **Save to DB**.
5. **Saved Stock Counts** lists every saved count; View re-opens it.

4.6 Item Adjustment

Menu: Sampath Operation → Item Adjustment

Add stock adjustments (plus or minus units) to an item, with date and note. They flow into every stock report as “Adjustment”.

How to use

1. Pick the item in the search list, the date, the quantity (use a minus sign to reduce) and a note.
2. Save. Use the filters to find old adjustments.
3. Delete an adjustment if it was wrong. **Export Excel** downloads the list.

4.7 Invoice GRN Check

Menu: Sampath Operation → Invoice GRN Check

Checks a LeverEDGE tax invoice PDF against the Age Analysis data. The PDF itself is never changed or stored.

How to use

1. Upload the tax invoice PDF. The page reads the invoice number, date, purchaser and totals in your browser (Gemini is used only if the layout is not recognised).
2. It looks the invoice up in the Age Analysis data and shows secondary amount, GRN value and date, credit note and cheque.
3. **Invoice to Excel** converts the whole invoice, as printed, into an Excel file.
4. **GRN Adjustment Note** opens a printable black-and-white note that refers to the original tax invoice.

> The adjustment note is a separate document. It is not a tax invoice and does not replace the original. Invoice amounts cannot be edited in YMS.

4.8 Send to Payments

Menu: Sampath Operation → Send to Payments

Select Age Analysis invoices whose payment is still pending and send them to payments with a send date and remark.

How to use

1. Set the bill date range and press Filter. Only **payment-pending** invoices (no cheque date yet) are listed.
2. Type in the **search box** to filter instantly. Ticks you made stay ticked when the search text changes.
3. Tick invoices one by one, or use **Select all** (selects the rows now shown).

4. Press **Send selected to Payments**, choose the **Send date**, add a **Remark** and press Send.

> An invoice can be in one request at a time. Invoices already sent show “Sent #n” and cannot be ticked. In the Age Analysis they carry a green paper-plane icon.

4.9 Sent Payment Requests

Menu: Sampath Operation → Sent Payment Requests

Shows every request sent from “Send to Payments” and creates the **Payments request Acknowledgement** Excel.

How to use

1. Each request shows its send date, remark, invoice count, GRN total and who sent it.
2. Press **View** to see the invoices. Tick some and **Remove selected** to take them out (they can be sent again), or use the pencil to edit date/remark and **Delete** to remove the whole request.
3. Press **Excel** for the whole request, or tick invoices and press **Excel (selected)**.

The Excel has Bill Number, Bill Date, Party Name, Secondary Final Bill Amount, ACT Delivery Date, GRN date SST, GRN Value (with total) and Scheduled cheque date (GRN date + 21 days), followed by the boxes for “Amended TAX invoices”, “Operation Manager stamp”, the signature line and the date.

4.10 PDF to Excel

Menu: Sampath Operation → PDF to Excel

Converts any PDF with selectable text into an Excel (or CSV) file. The PDF is read in your browser and is not uploaded.

How to use

1. Drop the PDF and press Convert.
2. Choose one sheet per page or all pages in one sheet, and adjust the column gap slider if columns are merged or split wrongly.
3. Check the preview, then press **Download Excel** or CSV.
4. For a scanned PDF (no text) use the “Read with Gemini” button.

5. Sampath Reports

5.1 Sampath Inventory Report

Menu: Sampath Reports → Sampath Inventory Report

Item stock in units with opening, primary purchase, primary returned, secondary, good rejected, adjustment, closing balance and damaged stock.

How to use

1. Choose **As At Date** (normal report up to that date) or **Date Range** (Opening Units = closing as at the From date; other columns show the period).
2. Use the Items and Customers filters (select boxes with item code and name) and the **Stock Location** filter: All, Good, or Damaged Stock items (-D).
3. Tick/untick the Damaged Stock column. The summary boxes above the table show the totals.
4. Click an item to open its **ledger** (latest first). Click a Damaged Stock number to see only its damage logs.
5. **Export Excel** downloads the table.

Good stock = Opening + Primary Purchase − Primary Returned − Secondary − Good Rejected + Adjustment. Damaged stock = confirmed Damage Entry lines + imported Sampath damages; it is a separate log and is not part of Closing Balance.

5.2 Sampath Age Analysis

Menu: Sampath Reports → Sampath Age Analysis

Invoice-wise payment turnaround: bill, delivery, GRN and cheque dates, with ages in days. All rows are shown at once (no paging).

How to use

1. Set the date range and filters, then Search.
2. Edit the **ACT Delivery Date** and **Doc Submit Date** directly in the table.
3. GRN value and date follow the GRN links (manual links and exclusions). Difference (Secondary − GRN − Manual adj) and Difference (GRN − Cheque) follow the Balancing Report.
4. A green paper-plane icon beside a bill number means it was sent to payments; click it to open the request.
5. Export Excel downloads the filtered rows.

5.3 Sampath Balancing Report

Menu: Sampath Reports → Sampath Balancing Report

Invoice-wise reconciliation of Secondary final bill, GRN, manual adjustment, GRN rejected, credit notes and cheques.

How to use

1. Choose the date range; tick “mismatch only” to see only invoices that do not balance.
2. Click the **Manual Adj.** cell, type the new total and press Enter (the history is kept).
3. Click a **GRN Rejected** cell to add a manual amount with a remark; the window shows the value from the Goods Rejected entries and the credit notes raised.
4. Click the GRN count to **link or exclude GRNs** for that invoice.
5. Total Diff = Secondary Final Bill − Manual Adj. − Cheque Value.

5.4 Inventory Reconciliation Report

Menu: Sampath Reports → Inventory Reconciliation Report

Values the stock at TUR: opening, primary purchase, primary return, pre secondary, secondary, closing — Good Stock and Damaged Stock side by side.

How to use

1. Choose As At or Date Range and filters (items, customers).
2. Press **View Details** for the item table.
3. Select a **Stock Count** to see physical quantity and value, **Good Short** (physical below system) and **Good Excess** (physical above system). Click a difference line to see the items.
4. **Save Report** stores a snapshot; Saved Reports lists, views or deletes them.
5. **PDF / Print** gives the full black-and-white report; **Summary + Sign** gives one A4 page with sign boxes for Stock Keeper, Sales Executive and Operation Manager.

5.5 Credit Aging Report

Menu: Sampath Reports → Credit Aging Report

Customer credit aging. The outstanding amount comes from the Sampath Age Analysis (GRN − cheque − credit note) where an invoice has GRN data.

How to use

1. Choose the report date and filters.
2. Use Export Excel or Print for the report.

5.6 USL PO Report

Menu: Sampath Reports → USL PO Report

Purchase order table built from the Market Order Import batches.

How to use

1. Pick an Order Proposal Date.
2. Review the PO table.
3. Export to a multi-tab Excel file.

6. Quick answers

Question	Answer
A GRN shows “Unlinked”.	Open Sampath GRN Summary → View batch → Find & Link, or link it from the Balancing Report.
An item is missing from Damaged Stock.	Confirm its damage line on Damage Entry AI Tally & Confirm, or check it was imported on Import Sampath Damages with a damage date inside the report period.
I sent the wrong invoice to payments.	Sent Payment Requests → View → tick it → Remove selected. It can then be sent again.
The Excel from Sent Payment Requests has the wrong date at the bottom.	The date is the request’s send date. Use the pencil to change it and generate the Excel again.
Stock count shows large short/excess.	Check the count date and the base (Current Stock or Last Stock Count) on Sampath Stock Reconciliation.
Can I edit the amounts on a tax invoice?	No. Invoice GRN Check only reads the PDF. Use a credit note or the GRN Adjustment Note.
